

What To Check For After a Drought

- **01.** Inspect your own home by looking over sensitive areas such as:
 - Structural supports
 - Foundation
 - Concrete areas
 - Crawl space
 - Basement

- **02.** Identify any of the following damages and take note of any that are present:
 - Wall cracks, floor cracks, or cracks near windows and doors
 - Basement flooding or excessive moisture
 - Crawl space moisture or humidity
 - Leaning or cracked chimneys
 - Bowed walls or sagging floors
 - Sticking or hard-to-open doors or windows

- **03.** Contact a professional foundation repair and waterproofing company to protect your home from further structural damage.
